

Apollonis is

Apollonis is the Greek national infrastructure for Digital Arts, Humanities and Language Research and Innovation. It brings together the leading strengths and capacities in the field by providing high-level computational tools, interoperable datasets and services. It consists of two ESFRI-related national networks in the Social Sciences and Humanities area, CLARIN:EL and DARIAH-GR, creating bridges where commonalities are observed.

So far has developed an open, secure, interoperable infrastructure providing language data and language processing services to the research community, industry and the general public.

So far has developed registries, thesauri and vocabularies, tools, good practice guides and has undertaken activities to disseminate know-how and monitor the use of digital methods in the humanities.

2018-2020:

- Support the continuous operation of [clarin:el](#).
- Introduce new services and resources.
- Upgrade the cloud computing infrastructure.
- Expand the network with new repositories and users of different categories.
- Organise targeted dissemination actions.
- Implement pilot applications of [clarin:el](#) and language technology specifically targeting social sciences and humanities.

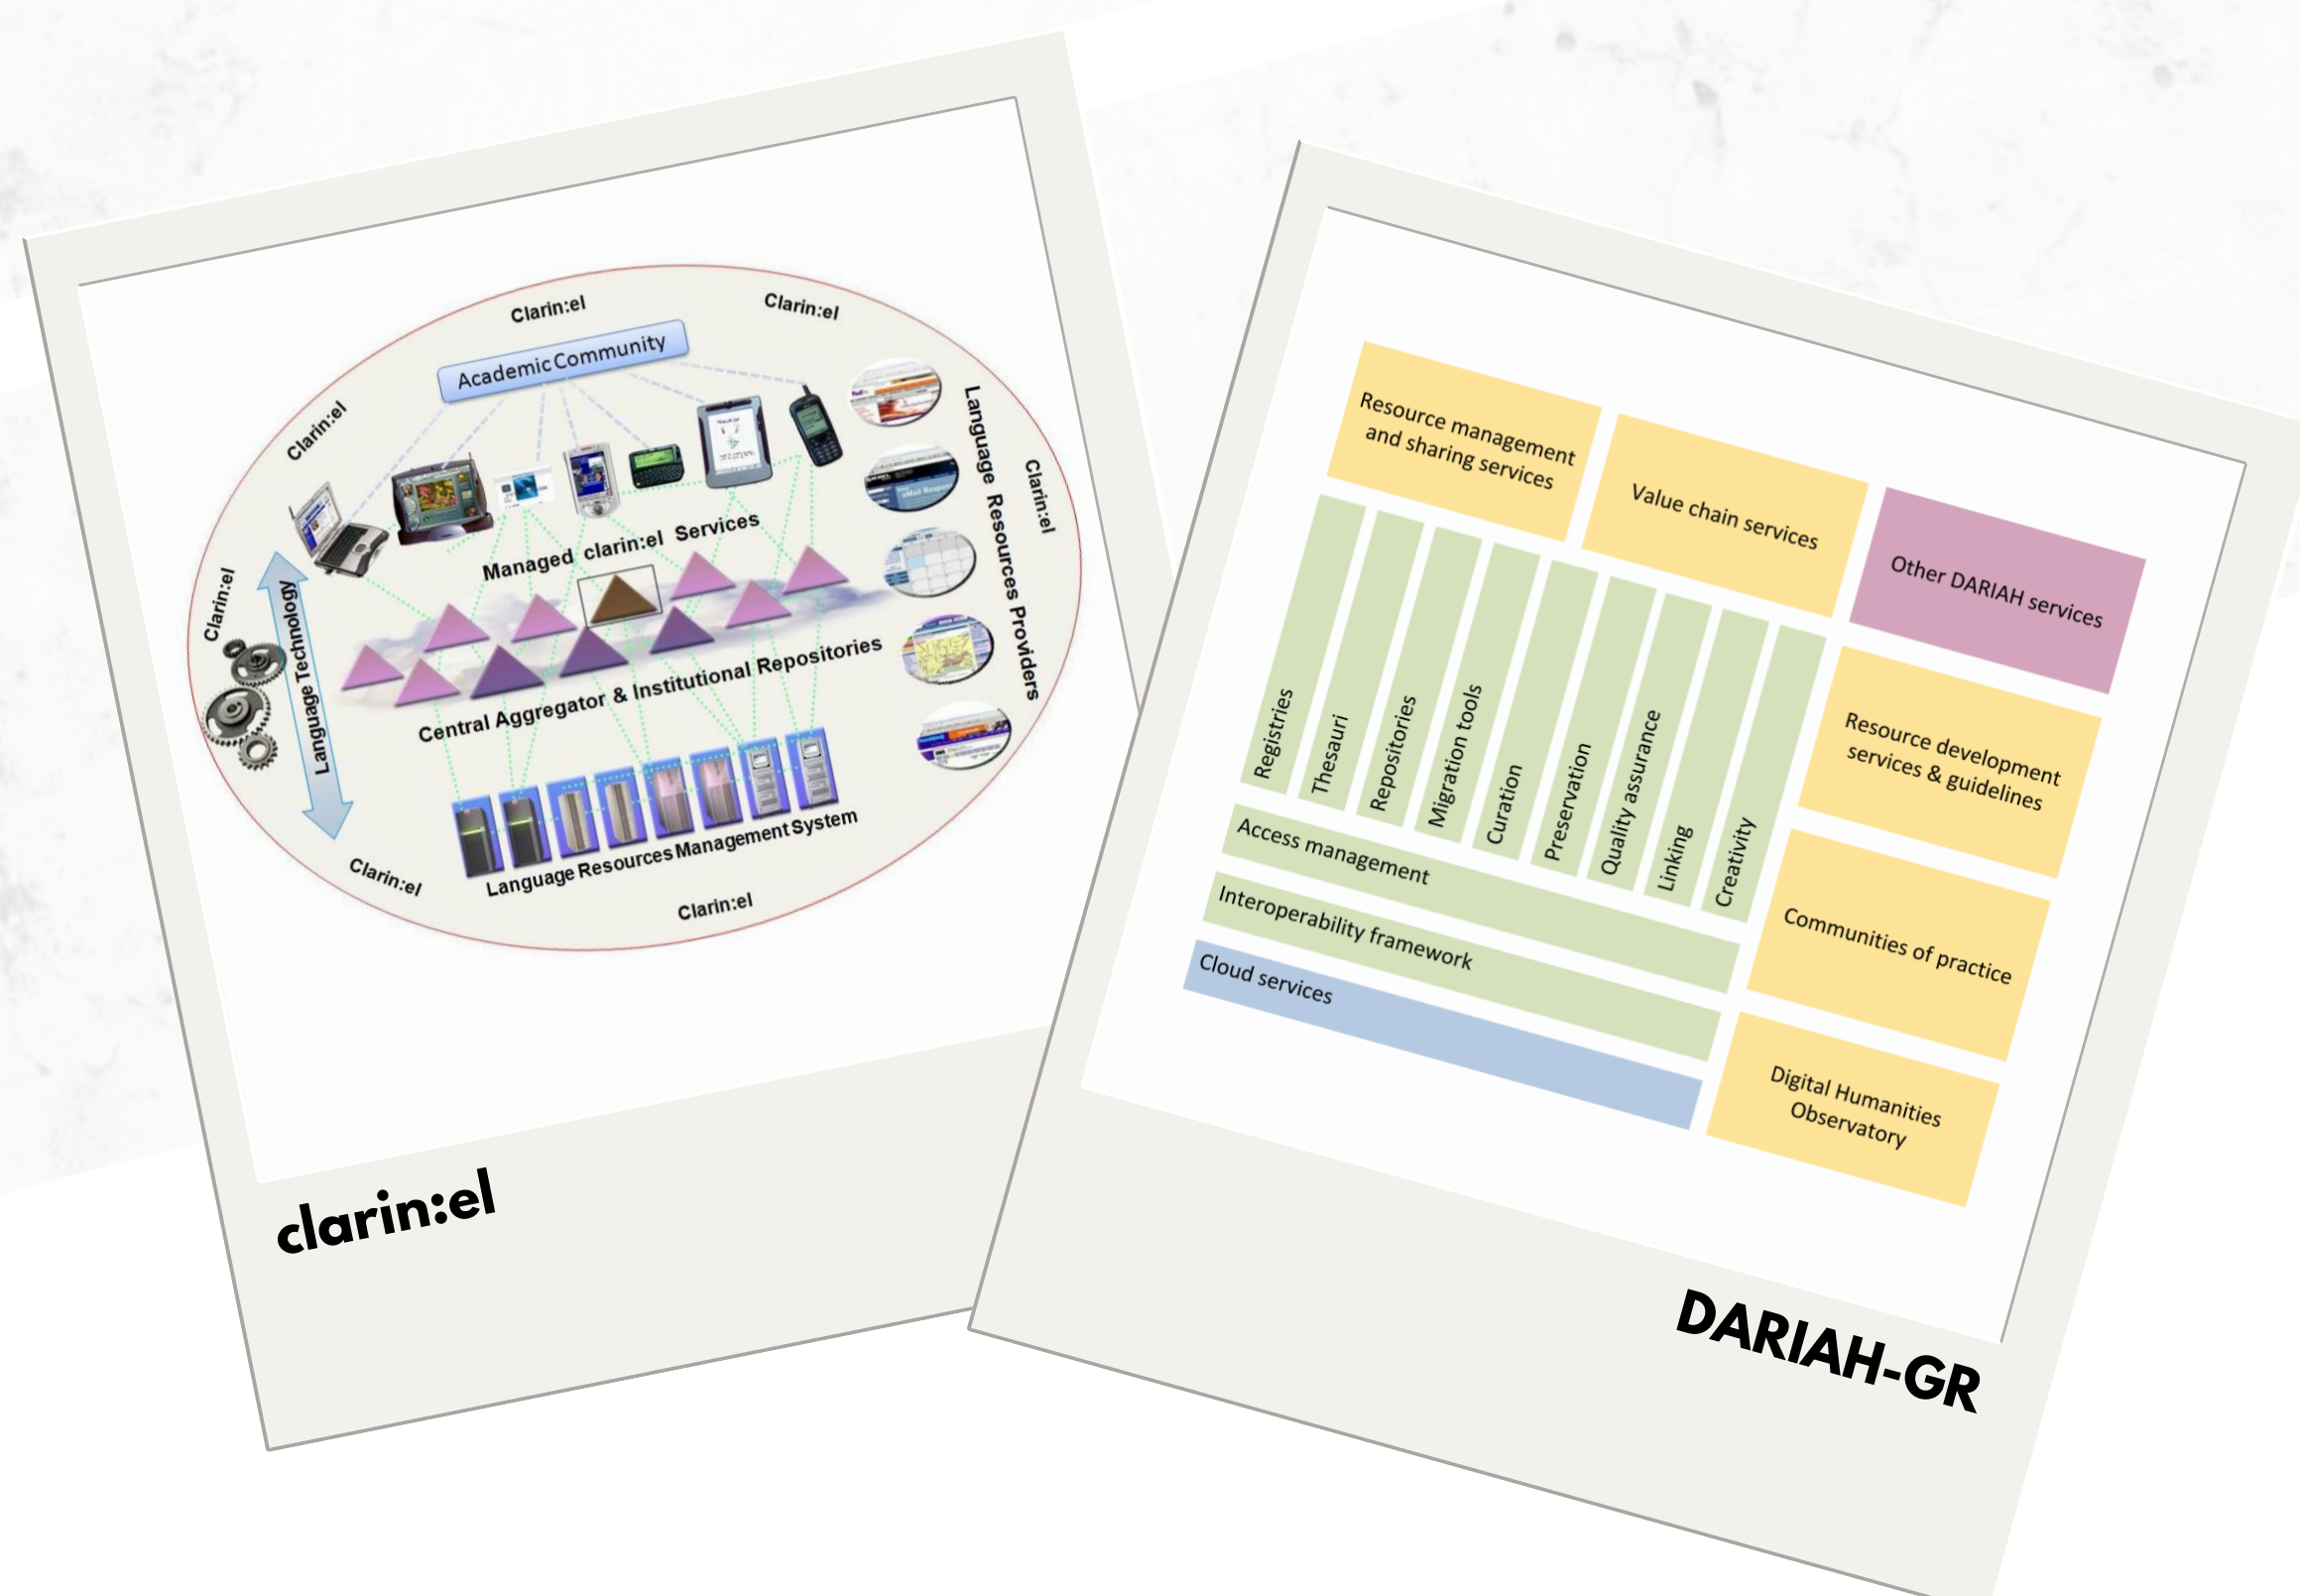

2018-2020:

- Support data aggregation.
- Offer curation, enrichment and dissemination services.
- Maintain and enrich data registries and thesauri.
- Organise targeted dissemination and training actions, including summer schools and internships.
- Run the Digital Humanities Observatory for monitoring and analysing the use of digital resources and tools in the humanities.
- Create links with the creative industries.

Lines of action

- 1 Tools and Services.** Apollonis will provide tools and services for supporting the entire life cycle of digital arts and humanities and language resources, including processes of acquisition, creation, documentation, knowledge extraction, analysis, annotation, curation, visualisation and publication of resources at various levels.
- 2 Resources.** Apollonis will create, integrate, curate and offer access to digital repositories, registries, text corpora, lexica, thesauri, datasets and metadata, and bibliography.
- 3 Education and Training.** The infrastructure will develop and provide training on digital tools, practices, methods and services through a series of events, workshops, seminars and summer schools aimed at researchers, students and professionals. Apollonis will furthermore offer digital training material such as webinars, tutorials and manuals.
- 4 Communities of practice.** Apollonis will foster emerging communities of practice in the digital humanities and language technology. This will be effected through sharing tools, services and resources; promoting relevant good practice guidelines and standards; focused training activities; supporting a sustained dialogue on theoretical and methodological trends and approaches, as well as intra- and inter-community interactions.
